WE HAVE EXCITING NEWS TO SHARE!

Two manuscripts focusing on the Guideline methodology & AGREE rating process were submitted to the **Journal of Spinal Cord Medicine** on behalf of Can-SCIP Expert Panel.

The draft guideline will be circulated to **recognized international experts and stakeholders** who did not participate in the development process for **external review**.

OUR PROGRESS TO DATE

The Can-SCIP Expert Panel has **compiled, adapted and refined all of the recommendations**. We have addressed specific comments and feedback provided during the consensus conference and through follow-up with working groups.

Expert panel members voted using an online survey tool to select the **most important and relevant recommendations**.

We have begun **Phase II** of the Guideline which begins with 2 rounds of voting to help prioritize domain areas for implementation.
